Commitment to achieving Net Zero

Dataspire is committed to achieving Net Zero Emissions by 2050.

We are aware that reducing our Greenhouse Gas Emissions represents significant benefits for us, our customers, suppliers and the wider community.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2022 (01/01/22 – 31/12/22)	
Additional Details relating to the Baseline Emissions Calculations.	
Baseline emissions were recorded for year ending December 2022 and produced in accordance with GHG Protocols for scopes 1 & 3. The inventory includes all measurable Scope 1 emissions and the following Scope 3; • Travel • Procurement • Waste & Water • Distribution (Upstream) • Distribution (Downstream) • Emissions from Fuel & Energy Scope 2 emissions are omitted from our reporting as Dataspire operates from leased premises where all electricity, heating, and cooling are supplied and managed by the landlord. As such, Dataspire has no direct contractual control over these utilities and no metered usage data was available when we did our baseline year.

Scope 1	20.88
Scope 2*	0.00*
Scope 3	461.53
